1. Was Mahatma Gandhi older or younger than 9 years old when he died?

A

1. Was Mahatma Gandhi older or younger than 140 years old when he died?

B

2. At what age did
Mahatma Gandhi die?

Mahatma Gandhi

1869 – 1948

How old was Gandhi when he died?

This difference can be explained by the
anchoring effect.

Fritz Strack and Mussweiler, Thomas. *Considering the Impossible: Explaining the Effects of Implausible Anchors*. *Social Cognition*, Vol. 19, No. 2, 2001, pp. 145-160”

..older or younger
than (9 OR 140) years..

Question	Actual value	Plausible anchors		Implausible anchors	
		High	Low	High	Low
Antarctic: mean temperature in winter (°C)	-68	-17	-43	45	-210
Einstein: year of first visit to United States	1921	1939	1905	1992	1215
Da Vinci: year of birth	1452	1608	1391	1952	-300
Gandhi: age	78	79	64	140	9
Ulm: altitude (m)	478	320	150	10,500	1,700
Aristotle: year of birth	-322	-220	-490	1832	-25,000
Whale: length (m)	33.0	49.0	21.0	900.0	0.2
Elbe: length (km)	1,165	890	550	45,000	25

Table 6
Overall z Values, Study 3

Anchor	Plausible	Implausible
High	.04 (79)	.25 (140?)
Low	-.13 (64)	-.17 (9?)

Note. $n = 67$ for all cells.

We can also experience this effect when we make software.

Planning poker

These patterns are identified as **cognitive biases.**

There are more than 100 ways in which you can be influenced!

Who am I?

- IT Consultant @ Info Support
- Software engineer, teacher, leader of the Java Community @ Info Support
- Disclaimer: claims are based on research and empirical evidence.

Today, I want to talk about **3**
common ways you can be
influenced.

.. such that we can increase our productivity!

#1 When labor leads to love.

"THE EFFECT"

MANHOWIE.COM

Including labor in the building process increases the perceived value of the product for the builder.

Research by Michael Norton, Daniel Mochon, and Dan Ariely

Builders

Non-Builders

Builders

Non-Builders

Do you like the product?

52% ▲

Non-builders: 2.5

Builders: 3.8

How much do you want to pay for this product?

63% ▲

Non-builders: $M = \$0.48$

Builders: $M = \$0.78$

We make stuff. Are we also subject to the IKEA effect?

Well, I definitely am.

And you probably too..

Where it starts..

When opening up a pull request, are you able to **objectively** evaluate your work?

Does it sometimes hurt when someone does not value your code?

.. where it takes you

Ignorance can lead to serious
**technical debt and missed learning
opportunities**

Does this sounds familiar?

Who of you can relate to the IKEA effect?

Why are we subjected to this bias?

An illustration of a man and a woman in a modern office. The woman is on the left, wearing a blue superhero suit with a red cape and a yellow 'S' emblem on her chest. She has long, wavy brown hair and is looking towards the viewer. The man is on the right, wearing a blue suit, a white shirt, a blue tie, and red suspenders. He has short brown hair, wears glasses, and is looking towards the viewer. They are standing in the foreground. In the background, there is a large office space with several desks, each with a computer monitor. Other people are working at their desks. Large windows in the background show a city skyline. A semi-transparent dark blue horizontal bar is overlaid across the middle of the image, containing the text 'Psychological need for competency' in white.

Psychological need for competency

Justifying your efforts

How can we prevent the IKEA-effect?

Before & during the work

To build or not to build it (completely) yourself?

After the work

Asses your ~~baby~~ product

Do you really consider tapping into external solutions or knowledge when you can build it yourself?

Do you weight your options objectively?

When building things from yourself..

- Investment
- Time to market
- Other problems may arise

**Consider third-party products:
stand on the shoulder of giants.**

is-odd

npm v3.0.1

downloads 1.9M/month

downloads 33M

Travis no longer available

Returns true if the given number is odd, and is an integer that does not exceed the JavaScript `MAXIMUM_SAFE_INTEGER`.

Please consider following this project's author, [Jon Schlinkert](#), and consider starring the project to show your ❤️ and support.

**You are not the first to a problem..
..even in new technologies**

foojay.io

DEVNEXUSTM

DEVOXXTM

Make your choices explicit (with Architectural Decision Records).

You can review, store and re-evaluate them.

Problem: Do you know the problem well enough?

Options: Do you also consider external solutions?

Considerations: Did you really consider all the options?

Be aware of your bias: Admit to yourself that you love it because you built it

Being more honest about the value of your work leads to better products.

#2 Joining the majority

Event-Driven Architecture

Infrastructure-as-Code

GraphQL

Cloud-native

Ooh, a green-field project.

- The struggle was real
- Being productive and learning new stuff
- Rework was inevitable

Bandwagon effect

The tendency for people to align their beliefs and behaviors with those of a group.

..regardless of the underlying evidence.

You can see it everywhere: stock,
(social) media & politics

Political polls **captures** and potentially **influences** decisions: voters tend to change their vote to **the winning party**

Research by Áron Kiss & Gábor Simonovits

Joining the majority in a meeting

When you base your technology decisions on popularity instead of the eligibility..

You might not have the best fit-for-purpose..

Are you working on a monolith?

Going against the bandwagon requires bravery

Do you dare to challenge decisions and stand-by your views?

Why are we subjected to this bias?

The availability heuristic, what you see is what you get.

Tversky & Kahneman (1973)

Other causes..

- Social proof
- Desire to be liked and accepted
- The majority is right

How can we prevent the bandwagon-effect?

Be aware of your bias: Identify when you join a majority

Educate yourself with the hype-cycle

AAAAAH

Gartner
/thoughtworks

In case of new technologies..

- What problem does it solve? (better than before)?
- Do I have that problem?
- Do I (fully) understand the trade-off?
- What complexity does it add?

Be aware about the survivorship bias

By Hanno Embregts & Maarten Mulders

We make **better software** when we don't jump on bandwagons.

@PeterWessels - Devnexus '24

People tend to focus on the trivial tasks and overlook the significant — Parkinson's Law of Triviality

C. Northcote Parkinson' (1957)

Bike Shed Effect – a/k/a Parkinson's Law of Triviality

Nuclear plant
cost: \$28,000,000
discussion: 2,5 minutes

Bike shed
cost: \$1000
discussion: 45 minutes

Adam Grant 
@AdamMGrant

Sorting email into folders is a huge waste of time.

The data: it takes an average of 67 hours a year, and actually makes it harder for you to find stuff.

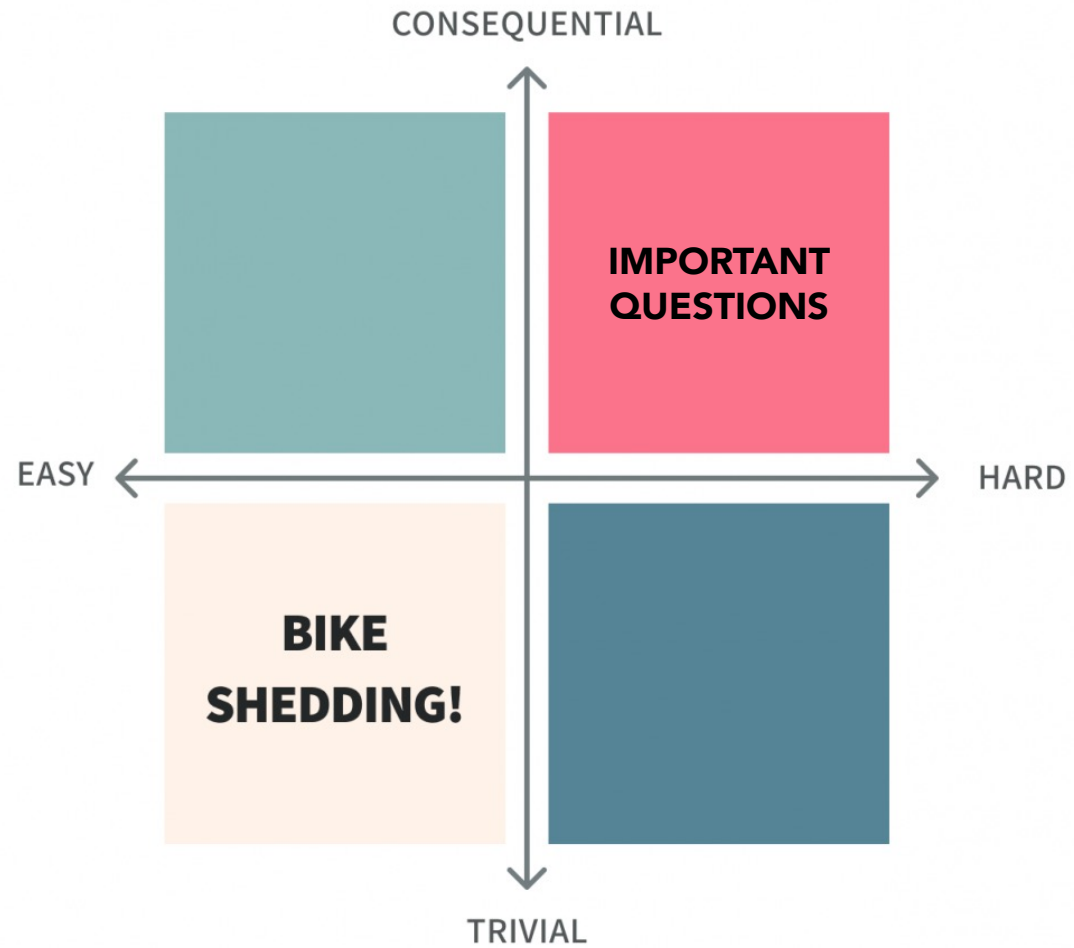

It's more efficient to just file all your messages in a single folder for saved mail.

drive.google.com/file/d/1LSi-ZI...

Table 5. Success and efficiency of finding sequences for High and Low filers based on median split of percent messages in folders.

Measure	% Mailbox Foldered	Mean	SD	Significance
% of All Sequences that are Successful	High	0.88	.12	t(356) = 0.98, p > 0.05
	Low	0.88	.11	
Sequence Duration (secs)	High	72.87	38.05	t(356) = 1.97, p < 0.05
	Low	66.07	26.64	
# Operations	High	3.69	1.46	t(356) = 2.17, p < 0.05
	Low	4.16	2.50	

2:26 PM · Nov 5, 2020

RADREADS.CO

**“...just because you are capable of building a bikeshed
[..] you not need to argue about every little feature just
because you know enough to do so.”**

<http://phk.freebsd.dk/sagas/bikeshed/>

Why are we subjected to this bias?

“It’s fun!” – everyone?
“It’s important: The devil is in the details” - everyone?

We feel more comfortable with these tasks

Tabs vs Spaces
Single quotes and double quotes
Flame wars about tools

"Please use `Collections.emptyList()` instead of `List.of()`"

Make sure you use the 'Final' keyword

Please use the Stream-API, it will be much faster..

How can we prevent the **bike shedding effect**?

Automate your trivial matters: Capture once, enforce automatically.

We are in the business of automation, right?

- Error-prone by Google
- Checkstyle
- Sonar
- Spotless
- OpenRewrite

Make your meetings worth your time.

By structurizing your meetings

Add structure to your meetings

1. Set a goal for each meeting
2. Keep on-topic: focus on outcomes
3. Use feedback loops
4. Dedicate time for complex matters.

PRODUCTIVE SCRUM MEETINGS

IN ORDER TO
REDUCE
STANDUP TIME
WE INSTALLED
SHOCK COLLARS
ON EACH
TEAM MEMBER

MONKEYUSER.COM

Minimizing Bike Shedding leads to higher productivity

And the important matters get done!

"THE **IKEA** EFFECT"

Bike Shed Effect - a/k/a Parkinson's Law of Triviality

Nuclear plant
cost: \$28,000,000
discussion: 2,5 minutes

Bike shed
cost: \$1000
discussion: 45 minutes

IKEA effect: When labor leads to love

Bandwagon Effect: Jump on the hype train

Bike Shedding Effect: Wasting your time on trivial tasks

If you are aware of your biases, you are able to battle your biased brain.

In hindsight, I should have done things differently..

Hindsight Bias: people convince themselves that a past event was predictable or inevitable

Thanks, Captain Hindsight!

*“The future depends on what
you do today”*

— **Mahatma Gandhi**

Thanks for your attention!
